New specifications for Invercote Duo in March — lighter and more flexible

High-yield Invercote Duo is as strong as ever but now a little lighter and more flexible too.

Invercote Duo is a solid bleached board (SBB) made by back-to-back pasting of double-coated Invercote. Its printing surfaces faithfully reproduce the most sophisticated images and it is recognized for its high stiffness, lightfastness and excellent strength. Invercote Duo is ideal for the packaging of aroma and flavour-sensitive products and due to its strength and stiffness is also highly suitable for various display purposes and different types of rigid premium packaging.

After extensive testing in coordination with some key customers, Iggesund has revised the product specification of Invercote Duo in order to offer the best possible service and availability to customers. The upgraded Invercote Duo enables a greater yield advantage for customers. It is also available in different production configurations with Trio and Quattro options and a choice of coated surface finish or an uncoated surface option for greater product flexibility.

“Invercote Duo is a high-yield paperboard with high stiffness and excellent strength properties which makes it ideal for folding and bending, without any cracking. At the same time, it is a lightweight paperboard, which is crucial from a sustainability point of view to lower the environmental impacts throughout the product lifecycle and reduce transport weight and waste,” says Per Berglund, Product Manager, Inverform & Value-added Products, Iggesund.

All orders for Invercote Duo placed now will receive the upgraded version of Invercote Duo.

Samples and a technical data sheet on the new Invercote Duo can be ordered via your Iggesund Sales and Technical representatives or be found at [Iggesund.com](https://www.iggesund.com).
